Lecture 8:

CULTURE IN INSECTS

Outline

▣ Introduction

- A brief history of animal culture
- Main empirical approaches
- Patterns *versus* mechanisms

▣ Insect social learning

▣ Evidence for insect culture

▣ Defining animal culture

Part 1

▣ Cultural transmission of sexual preferences in *D. melanogaster*

▣ General conclusion

▣ Final remarks

▣ Challenges for the future

Part 2

A brief history of animal culture

- ▣ **Until the end of the 1980s: culture was mainly **human centered****
 - => Definitions adapted to humans (captured human specificities)
 - => Inappropriate to study animal culture
 - => Mainly theoretical. Few experiments
 - Historically human sciences started the study of culture
- ▣ **From the early 1990s: **animals culture emerged****
 - From Animal Social Learning (see Lectures 2 & 3)
 - ▣ First in vertebrates,
 - ▣ After 2000 examples emerged in **insects**
- ▣ **Late 2000s became part of **Behavioral Ecology****
 - Textbook: e.g. Chapter 20 in Danchin, Giraldeau and Cézilly 2008
 - + emergence of more experimental approaches

Main approaches

▣ Three main approaches

- 1- Modelling: conditions of emergence and potential impacts
- 2- Animal social learning (see Lectures 2 & 3)
- 3- Reporting on **persistent patterns of behavioral variation across populations** (ie traditions)
- Produced the wealth of data presented in this module

▣ Limitations

- Quasi no experiments
- Social learning: not sufficient to generate a cultural process
- Traditions: Hard to rule out other explanations for the observed patterns of variation among populations:
 - Ecological correlates/causes
 - Genetic correlates/causes
- => **Other approaches necessary**

Patterns *versus* mechanisms

- ▣ The same pattern (traditions) can be produced by many different mechanisms
- ▣ Focus on the mechanism to show that the observed traditions are actually produced by the characteristics of social learning
- ▣ Implies rethinking the definition of animal culture

Insect social learning

Insect social learning

▣ Three contexts of insect social learning

▣ **Foraging:**

- Bee dance (Von Frisch & Chadwick. 1967)
- Detecting cheating flowers (Baude *et al.* 2008. *Animal Behaviour*)

▣ **Danger**

- Crickets: (Coolen *et al.* 2005. *Current Biology*)

▣ **Mate choice:**

- Mate copying in *Drosophila* (Mery *et al.* 2009. *Current Biology*)

Foraging

The first and most famous example

Von Frisch & Chadwick. 1967
Nobel price in 1973

Social learning about foraging

- ▣ Bumble bees (*Bombus terrestris*)
- ▣ Cheating Plants don't provide nectar
- ▣ Detection and Learning by Bumble bees
- ▣ Experiment

Baude *et al.* 2008. *Animal Behaviour*

Cheating flowers

4 μ L of water

Flowers with nectar

4 μ L of sugar
30% w/w without
odour

Filling and cleaning
after every round

Cheating

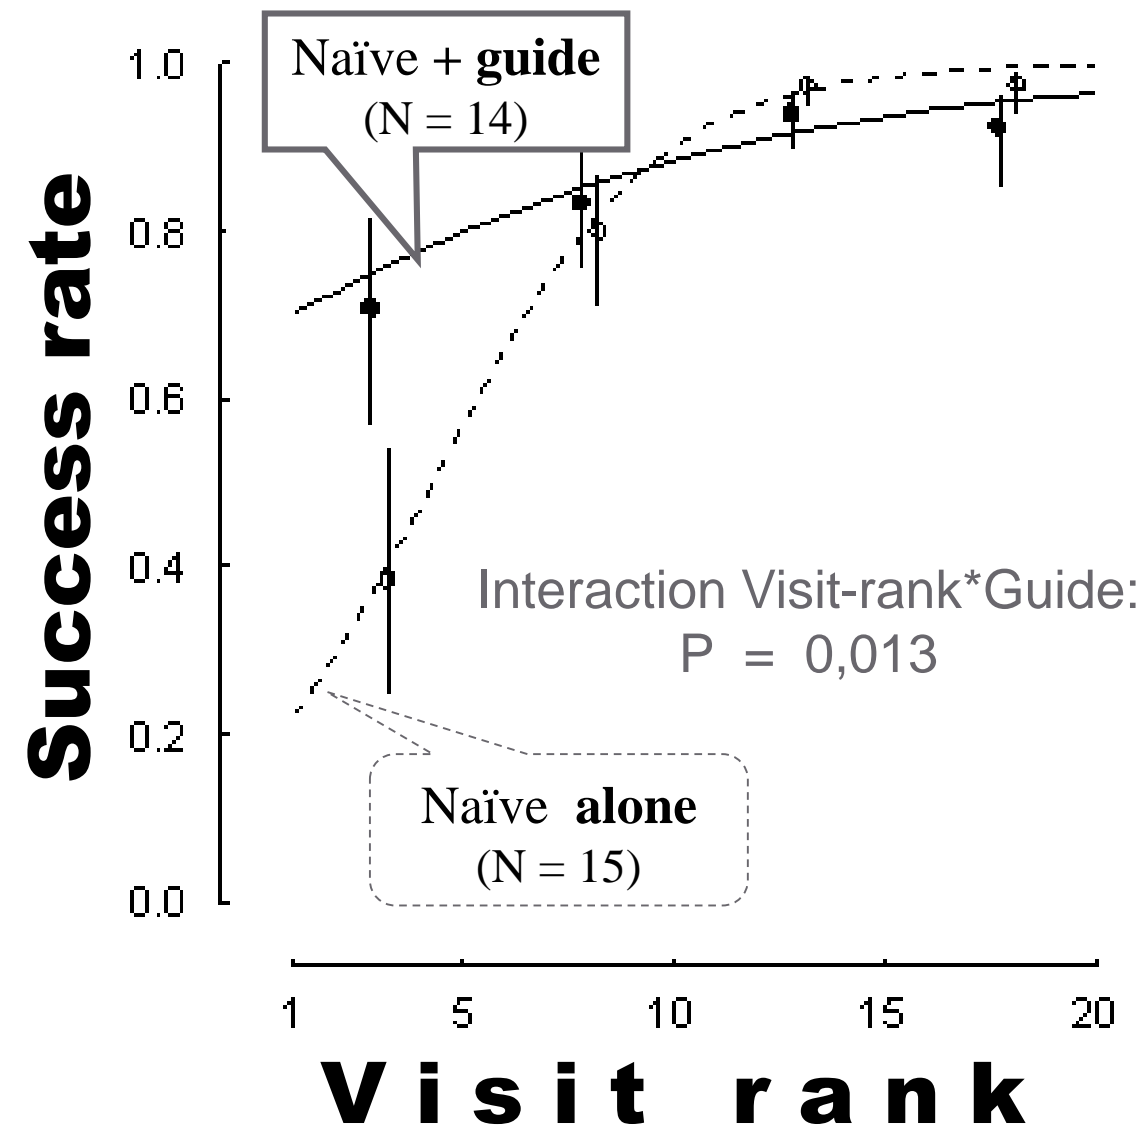

?

Guide in
the know

With nectar

- Social learning in Bumble bees in a foraging context

Social learning about **danger** (Crickets and Spiders)

Demonstrator crickets

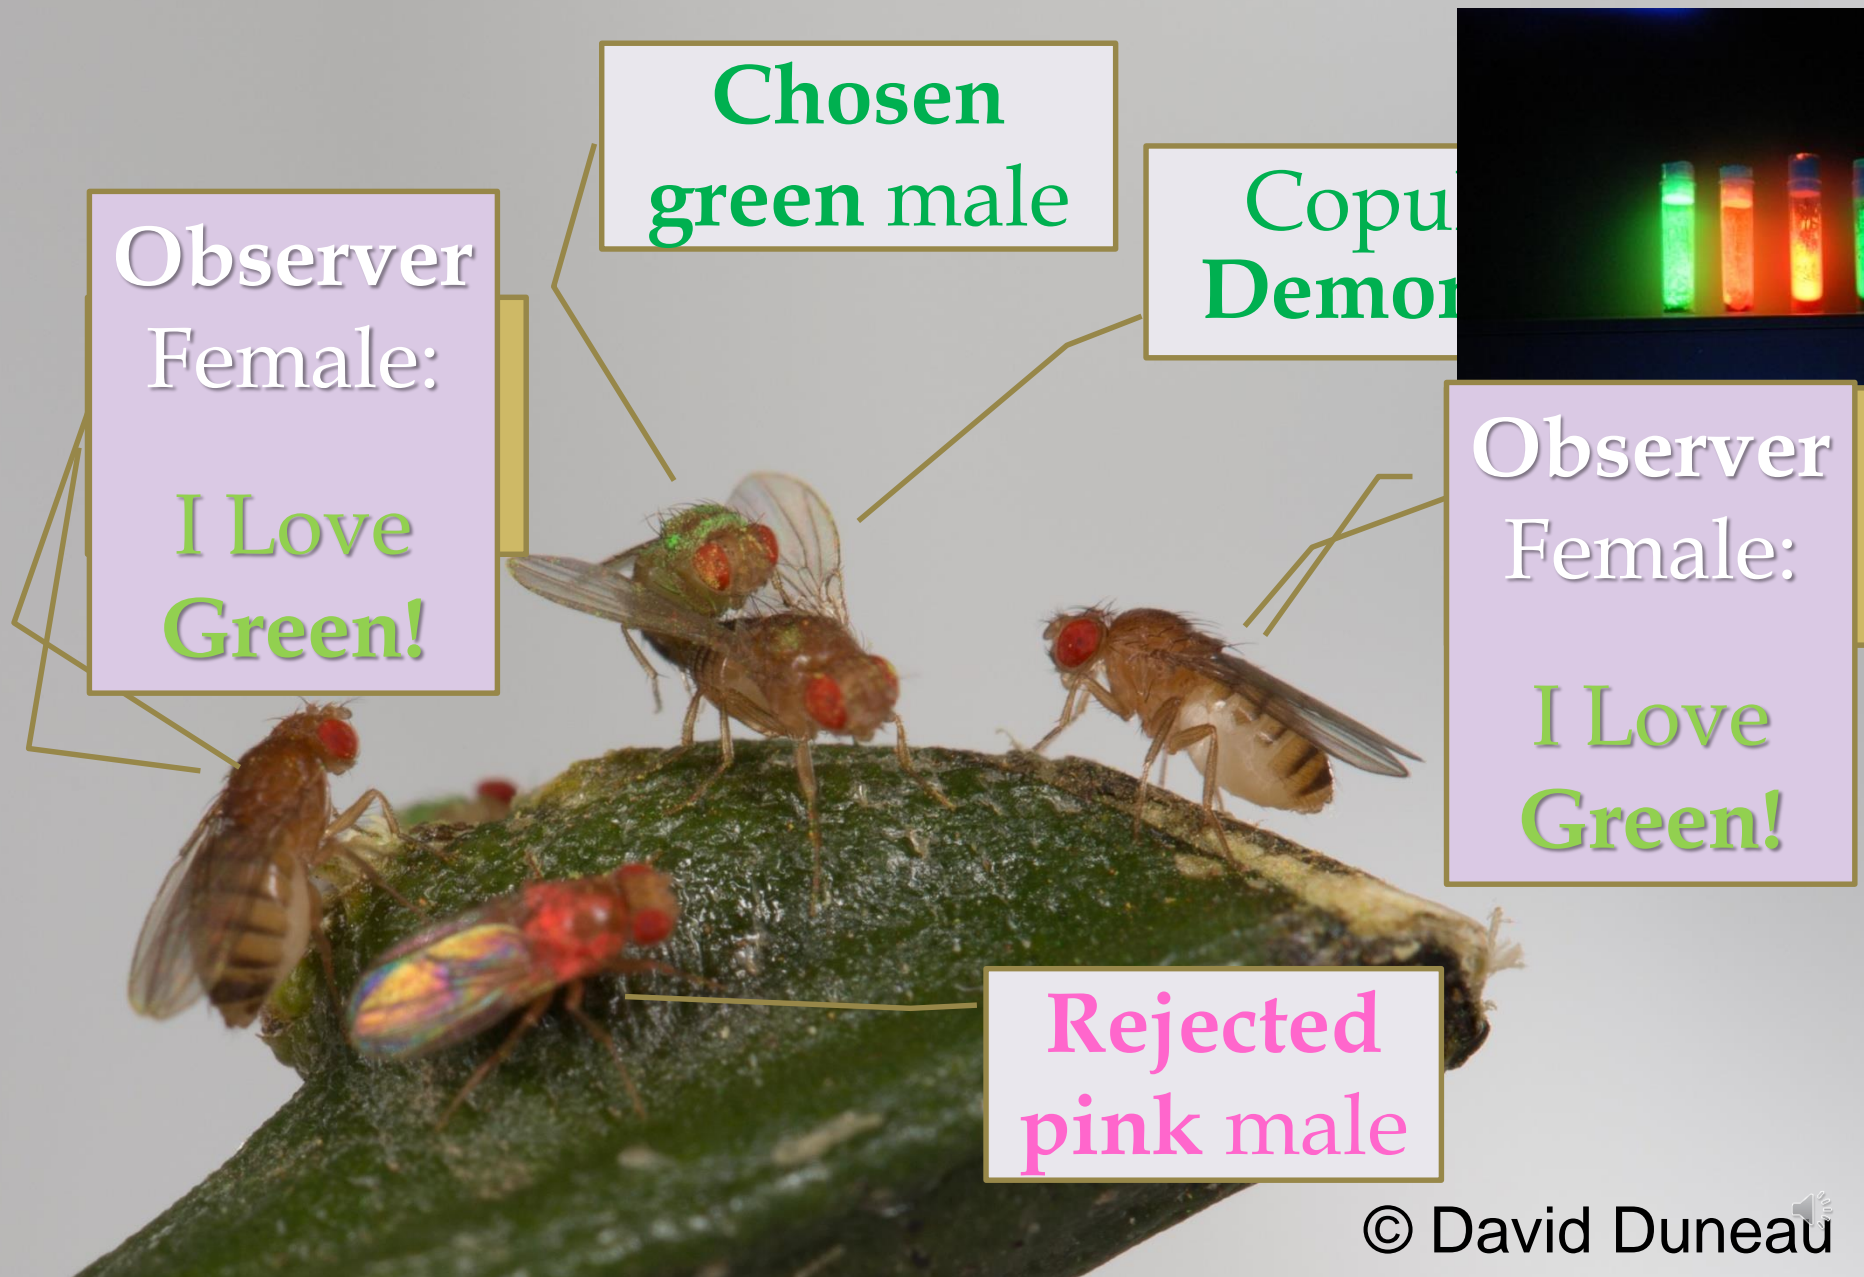

Observer crickets

- ❑ Significant difference
- ❑ More hidden

Social learning and mate-choice

Criterion 1: social learning

- One live **Demonstration** of one female choosing between **1 green** and **1 pink** males

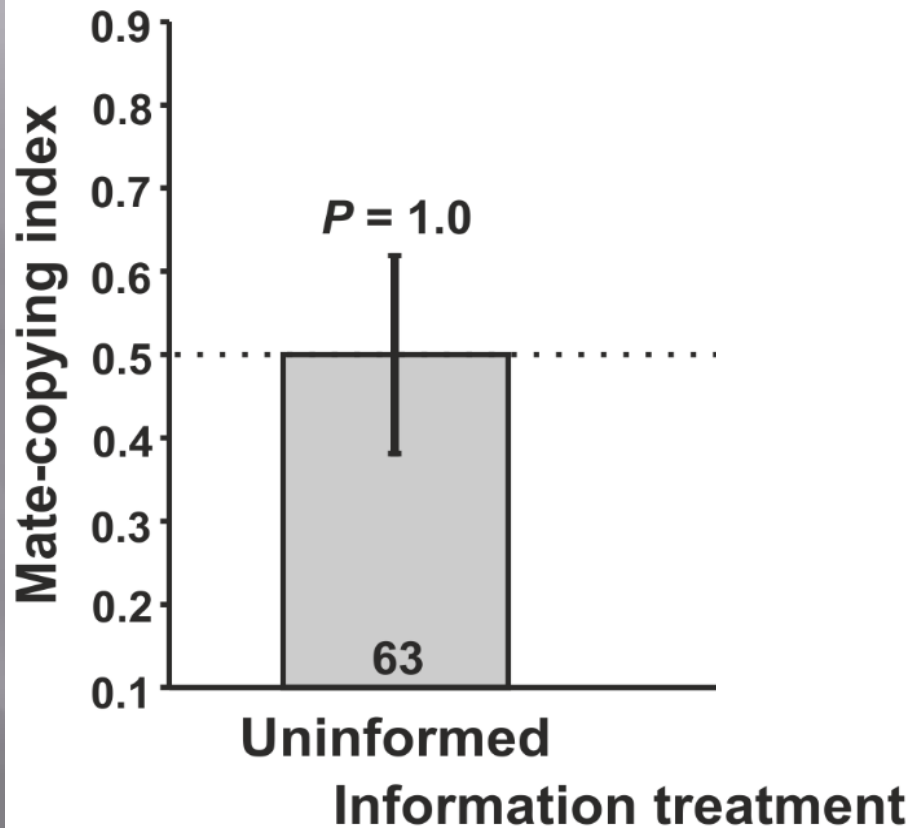

Criterion 1: social learning

- ▣ One live **Demonstration** of one female choosing between **1 green** and **1 pink** males

Mate-choice test

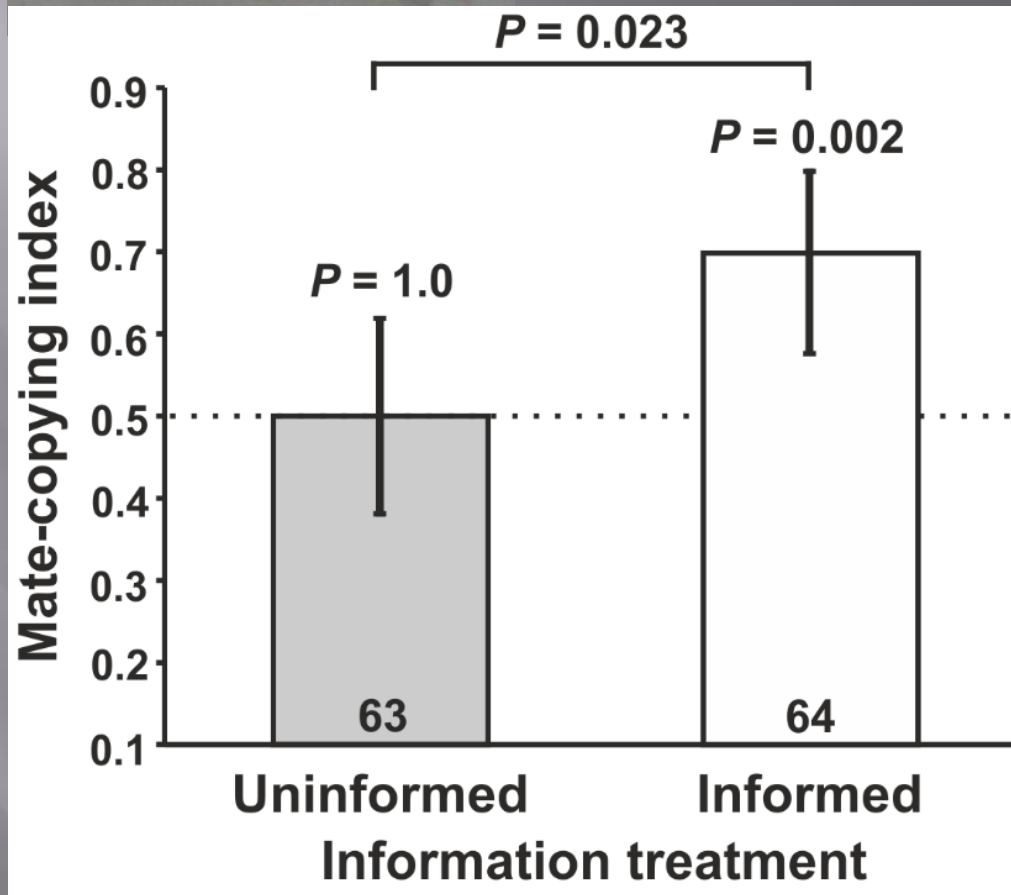

Results

Mery *et al.* 2009 *Curr Biol*; Dagaëff *et al.* 2016 *Anim Behav*;
Danchin *et al.* 2018 *Science*

Results

‘Speed learning’

Females showed a bias for males of the accepted than the rejected phenotype during demonstrations

Mery *et al.* 2009 *Curr Biol*; Dagaëff *et al.* 2016 *Anim Behav*;
Danchin *et al.* 2018 *Science*

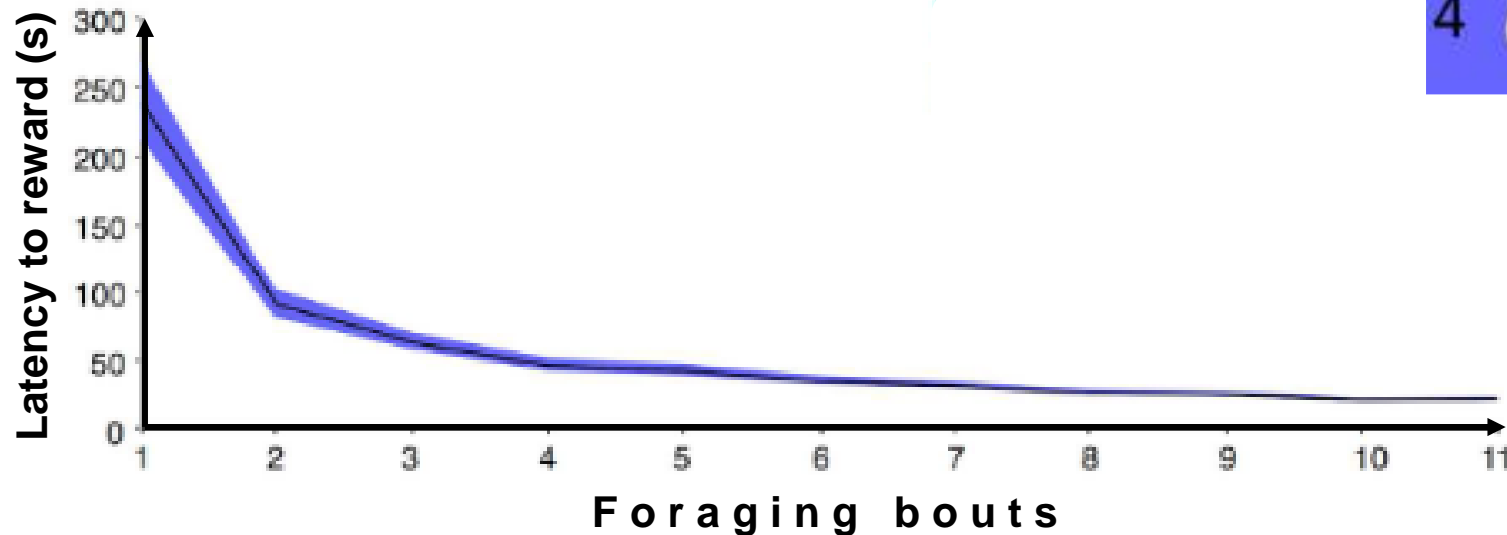

Evidence for insect culture

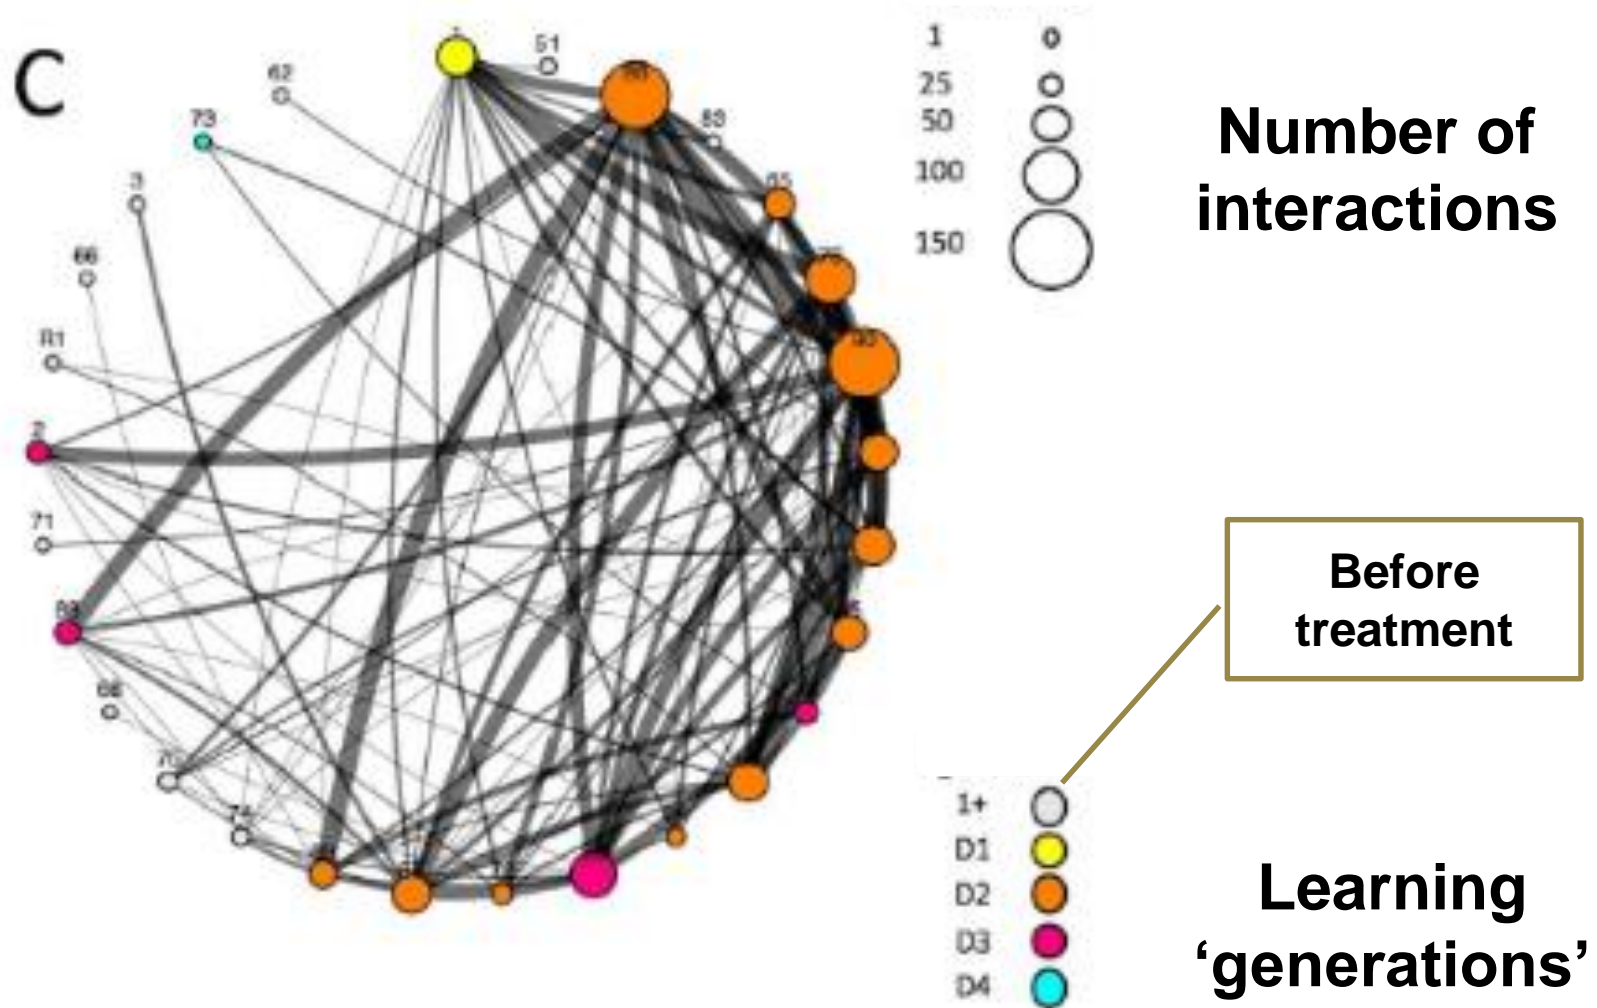

Potential examples of insect culture

□ String pulling in bumble bees

- Training phase to pull a string to get reward
- The introduce a trained individual in its colony
- Observe the string pulling performance of colony members
- Is there a diffusion of string pulling within the colony?

Diffusion of string pulling within a colony

IS this an example of culture?

- ▣ Fascinating
- ▣ But,...
 - => it is only transmitted within colony
 - No transmission among colonies
- ▣ **What is animal culture exactly?**

Outline

▣ Introduction

- A brief history of animal culture
- Main empirical approaches
- Patterns *versus* mechanisms

▣ Insect social learning

▣ Evidence for insect culture

▣ Defining animal culture

Part 1

▣ Cultural transmission of sexual preferences in *D. melanogaster*

▣ General conclusion

▣ Final remarks

▣ Challenges for the future

Part 2

What is animal culture?

In the light of what we now know
about Social Learning and the
history of the field

Is Social learning sufficient?

- ▣ 1990s authors underlined that social learning is not sufficient to generate culture. Social learning is just one criterion (**criterion 1**) of culture.
The socially learned trait must **also** be
 - Transmitted from older to younger individuals in order to persist in time (across generations). (Avital & Jablonka 2000).
Criterion 2: transmission across age classes
 - Memorized for sufficient time to allow other individuals to copy it (Brooks 1998). **Criterion 3: Durability**
 - Trait- rather than individual-based **Criterion 4: Trait-based**
- ▣ Four criteria integrated into a single definition of animal culture (Danchin & Wagner, *Oikos* 2010)

Definition of animal culture

1) “The part of phenotypic variation that is **transmitted across generations through social learning**”

**Socially inherited variation
among populations
= Patterns**

Danchin & Wagner, 2010. *Oikos*
Danchin *et al.* 2011. *Nature Rev. Genet.*

2) Study the properties of social learning that can lead to patterns of cultural traditions

Most striking marker of Culture
=
Mechanisms

Danchin & Wagner, 2010. *Oikos*
Danchin et al. 2011. *Nature Rev. Genet.*

4 criteria of culture

- ▣ Be demanding: **the four criteria to be met simultaneously** to be able to claim that a trait is at least partly culturally transmitted

- ▣ Applying this mechanistic definition to a given animal model
- ▣ By testing the 4 + 1 criteria in that system
